

POWER SOUTH NEPEAN

Notice of Commencement of Class Environmental Assessment and Invitation to a Community Information Centre

We're planning now to meet your future electricity needs

To ensure South Nepean has the power to grow, Hydro Ottawa Limited (Hydro Ottawa) and Hydro One Networks Inc. (Hydro One) have initiated a Class Environmental Assessment (EA) for new electricity transmission facilities in the area.

The Power South Nepean project proposes:

- a new municipal transformer station (MTS) within the study area shown on the map; and
- rebuilding an existing 115 kilovolt (kV) transmission line to a new double circuit line with 230 kV capacity. This line would connect the new MTS to the 230 kV line south of West Hunt Club Road.

The transmission line rebuild would require replacing the existing transmission structures and widening of the corridor in certain locations.

Planning and approvals

This project is being planned in accordance with the *Class Environmental Assessment for Minor Transmission Facilities*, under Ontario's *Environmental Assessment Act*. The Class EA is a streamlined process to ensure that minor transmission facility projects with a predictable range of effects are planned and carried out in an efficient and environmentally-acceptable manner.

The proposed project is also subject to federal approval under the *Canadian Environmental Assessment Act*. Contingent on the completion of the Class EA process and other approvals, construction of these new facilities could begin in 2020.
